Jean Paul Andrade Delgadillo

Senior DevSecOps Engineer · MLOps · DataOps · Cloud

Lima, Peru · +51 902 392 092 · jean-paul-a@hotmail.com · linkedin.com/in/jeanpaulandrade

PROFESSIONAL SUMMARY

Senior DevSecOps Engineer with 7+ years building secure CI/CD platforms, cloud infrastructure and reliability practices for banking, logistics and consumer-goods companies in Peru, Mexico and Brazil. Currently at Interbank, designing GitHub Actions pipelines for DataOps and MLOps teams and leading the adoption of AI agents inside the software delivery lifecycle. Hands-on across AWS, Google Cloud and Azure with Terraform, Kubernetes and security testing (SAST, DAST, continuous penetration testing). Pursuing a Master's degree in Artificial Intelligence to deepen the ML side of platform engineering.

PROFESSIONAL EXPERIENCE

Interbank — **Lima, Peru**

Senior DevSecOps Engineer — *June 2026 – Present*

- Design and build GitHub Actions CI/CD pipelines for 15 DataOps teams, standardizing how data workloads are tested, validated and promoted to production.
- Build MLOps pipelines for the Machine Learning team, automating the path from model code to deployment.
- Lead the integration of AI agents built on GitHub Copilot and Claude into the SDLC: a pull request review agent that summarizes changes and flags risks before human approval, and a security agent that triages SAST findings, filters false positives and proposes fixes.
- Design an AI agent for DataOps pipelines that validates schema changes and data quality before promotion to production.
- Migrated 100 repositories from Bitbucket to GitHub, consolidating source control and CI/CD on a single platform.
- Develop Infrastructure as Code with Terraform to provision and manage AWS environments.
- Integrated dashboards that track DORA metrics (deployment frequency, lead time for changes, change failure rate, time to restore) for DataOps pipelines.

Stack: AWS, GitHub Actions, Terraform, Git, Bitbucket, GitHub Copilot, Claude.

Consubanco — **Mexico City, Mexico**

DevSecOps Engineer — *February 2025 – December 2025*

- Managed Infrastructure as Code on Google Cloud Platform with Terraform and Terragrunt.
- Automated and optimized CI/CD workflows in GitHub Actions, reducing execution times and runner costs.
- Guided Machine Learning and Data Engineering teams in adopting MLOps and DataOps practices on Databricks, MLflow and Airflow.
- Worked with the pentesting team to embed Continuous Penetration Testing (CPT) into pipelines and services.
- Standardized observability, metrics and logging around DORA metrics as part of the SRE function.
- Automated pull request templates to streamline how developers integrate changes into production.
- Automated controlled production deployments through business-calendar integrations.
- Optimized cloud resource utilization on Google Cloud Platform.

Stack: Google Cloud Platform, Databricks, MLflow, Google ML, Airflow, pandas, Python, Go, Rust, Bash, GitHub Actions, Kubernetes, Prometheus, Grafana, SonarQube, Terraform, Terragrunt.

Encora — **São Paulo, Brazil**

Infrastructure Engineer — *October 2024 – February 2025*

- Designed and implemented the infrastructure architecture for the team on AWS.
- Managed Infrastructure as Code on AWS with Terraform.
- Automated software delivery pipelines in GitHub Actions to establish DevOps practices.
- Implemented a secrets vault to manage credentials securely and keep them out of declarative files.

Stack: AWS, GitHub Actions, Terraform, Bash, Prometheus, Grafana.

Encora (client: Scotiabank) — **Lima, Peru**

Site Reliability Engineer — *January 2023 – October 2024*

- Implemented SAST tooling (Checkmarx, SonarQube) in delivery pipelines.
- Integrated HashiCorp Vault for secure secrets management.
- Automated Jenkins CI/CD pipelines.
- Improved alerting with detailed error notifications delivered through Microsoft Teams plugins.
- Implemented Backstage as a service catalog, giving teams API and job visibility, metric extraction and data documentation.

Stack: Google Cloud Platform, Jenkins, Groovy, Kubernetes, Docker, Checkmarx, SonarQube, Fortify, Black Duck, HashiCorp Vault, Backstage, PowerShell, Bash.

Encora (client: Alicorp) — **Lima, Peru**

DevOps Engineer — *October 2022 – October 2023*

- Promoted Trunk-Based Development as the standard practice for mature teams.
- Developed infrastructure provisioning with Terraform and Ansible.

- Reduced and optimized Azure cloud costs.
- Implemented version control policies in production environments to ensure controlled deployments.

Stack: Azure, Azure DevOps, Azure Boards (custom workflows, governance, automation rules), Kubernetes, Terraform, Ansible, Git.

99minutos **Mexico City, Mexico**

Site Reliability Engineer *March 2022 – October 2022*

- Led the rollout of trunk-based development across 32 development teams.
- Created reusable repositories and pipeline templates adopted as the common CI/CD integration standard for all teams.
- Built multicloud infrastructure on Google Cloud Platform and AWS, covering Docker, Kubernetes, virtual machines and monitoring services.
- Automated deployments with Python and Bash.
- Implemented continuous monitoring of DORA metrics with Prometheus and Grafana.
- Ran recurring workshops for development teams on security best practices and CI/CD workflow.

Stack: Google Cloud Platform, AWS, Docker, Kubernetes, Python, Bash, Prometheus, Grafana.

Tata Consultancy Services **Lima, Peru**

DevOps Engineer *August 2019 – February 2022*

- Managed Jenkins configurations for continuous integration and deployment to Azure.
- Developed Groovy scripts for shared Jenkins workflows.
- Created automated testing pipelines using mocks and JUnit 5.
- Monitored Java-based APIs hosted on Azure, building dashboards for error tracking and performance.
- Established logging policies that reduced false positives and improved log readability.
- Developed reactive Java (RxJava) microservice components.
- Documented implemented processes and wrote onboarding manuals for internal teams.

Stack: Azure DevOps, Jenkins, Groovy, Java 8 and 11, Kubernetes, Cosmos DB, API Management, Azure Front Door, Storage Accounts, Static Web Apps, Azure Data Factory.

TECHNICAL SKILLS

- **Cloud:** AWS, Google Cloud Platform, Azure.
- **Infrastructure as Code:** Terraform, Terragrunt, Ansible.
- **CI/CD and source control:** GitHub Actions, Jenkins, Azure DevOps, Bitbucket, Git.
- **MLOps, DataOps and AI:** Databricks, MLflow, Airflow, Kubeflow, TensorFlow, Google ML, Kafka, GitHub Copilot, Claude, AI agents in the SDLC.
- **Containers and orchestration:** Kubernetes, Docker.
- **Application security:** Checkmarx, SonarQube, Fortify, CodeQL, Black Duck (SAST and SCA); OWASP ZAP, Burp Suite, Fluid Attacks (DAST); HashiCorp Vault.
- **Observability:** Prometheus, Grafana, DORA metrics dashboards, Backstage.
- **Languages and scripting:** Python, Java, Go, SQL, JavaScript, Groovy, Bash, PowerShell.
- **Databases and APIs:** BigQuery, PostgreSQL, MySQL, SQL Server, Cosmos DB, Azure API Management.

EDUCATION

Master's degree in Artificial Intelligence — Universidad Internacional de Valencia (VIU), Spain *In progress*

Bachelor's degree in Systems and Computer Engineering — Universidad Tecnológica del Perú (UTP), Lima *August 2024*

English, Advanced level — Británico (Asociación Cultural Peruano Británica), Lima *August 2021*

LANGUAGES

Spanish: native · **English:** fluent (writing C2, speaking C1) · **French:** writing A2, speaking B2
